

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings that are utilized on lift masts so as to help them work in tough environmental surroundings. Lift masts are often subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is frequently exposed to environmental influences like for example heat, dust, cold, moisture, contamination and aggressive ambient air. Hence, the lift masts' guidance arrangements have to be specifically robust and have a particular high load carrying capacity.

Carriage rollers have been created as the solution for functioning in different environmental conditions. These bearings are the solution where the guidance arrangements of the lift masts have to be economical and maintain operational security while having the ability to deal with a specifically high load carrying capacity.
